Collaborative Program in
Knowledge Media Design
University of Toronto

Knowledge Media Design
spans the study of the ways in which media and media technologies shape, and are shaped, by human activity. We design, build, use, evaluate, and critique the media and policies of our networked world. People and their practices are at the heart of all we do.

Collaborative Program
provides a specialization for graduate students (Master's or PhD level) from a variety of academic backgrounds interested in a human-centred approach to the design and use of new media in the context of the real world practices of individuals and communities.
